The design of the furnace has been listed for installation in recreational vehicles only. In order for the furnace to operate in conformity with generally accepted safety regulations, the installation instructions must be followed. Failure to comply with the installation instructions will void the warranty on the furnace and any responsibility on the part of Suburban Manufacturing Company.

The furnace was inspected before it left the factory. If any parts are found to be damaged, do not install the furnace. Immediately contact the transportation company and file a claim.

**FOR YOUR SAFETY**

**WHAT TO DO IF YOU SMELL GAS:**
- Extinguish any open flame.
- Evacuate all persons from the vehicle.
- Shut off the gas supply at the gas container or source.
- Do not touch any electrical switch, or use any phone or radio in the vehicle.
- Do not start the vehicle’s engine or electric generator.
- Contact the nearest gas supplier or qualified service technician for repairs.
- If you cannot reach a gas supplier or qualified service technician, contact the nearest fire department.
- Do not turn on the gas supply until the gas leak(s) has been repaired.

This book contains instructions covering the operation and maintenance of your furnace.

**INSTALLER:** LEAVE THIS MANUAL WITH THE APPLIANCE.

**CONSUMER:** RETAIN THIS MANUAL FOR FUTURE REFERENCE.

Should you require further information, contact your dealer or nearest Suburban Service Center.

**FOR YOUR SAFETY**

**DO NOT STORE OR USE GASOLINE OR OTHER FLAMMABLE VAPORS AND LIQUIDS IN THE VICINITY OF THIS OR ANY OTHER APPLIANCE.**

**WARNING!** Improper installation, adjustment, alteration, service or maintenance can cause property damage, personal injury or loss of life. Refer to the installation instructions and/or owners manual provided with this appliance. Installation and service must be performed by a qualified installer, service agency or the gas supplier.

**WARNING!** Be sure the furnace and all ignition systems are “OFF” during any type of refueling and while vehicle is in motion or being towed.

**INSTALLATION INSTRUCTIONS**

**WARNING!** Installation of this appliance must be made in accordance with the written instructions provided in this manual. No agent, representative or employee of Suburban or other person has the authority to change, modify or waive any provision of the instructions contained in this manual.

**THESE FURNACES ARE DESIGNED AND INSTALLED IN SUCH A MANNER AS TO BE REMOVABLE ONLY FROM WITHIN LIVING AREA OF THE RECREATIONAL VEHICLE.**

**IF UNIT IS TO BE INSTALLED VERTICALLY, YOU MUST USE KIT #520965 (INSTALLATION INSTRUCTIONS ARE ENCLOSED IN KIT).**

**CAUTION:** If possible, do not install the furnace to where the vent can be covered or obstructed when any door on the trailer is opened. If this is not possible, then the travel of the door must be restricted in order to provide a 6” minimum clearance between the furnace vent and any door whenever the door is opened.

**NOTE:** The exhaust temperature of this furnace could discolor or warp some materials. You should verify that the material used on the coach door, panel, or cover will not discolor or warp from the exhaust temperature whenever any door, panel, or cover is in the open position.

**CAUTION:** Due to the differences in vinyl siding, this appliance should not be installed on vinyl siding without first consulting with the manufacturer of the siding or cutting the siding away from the area around the appliance vent.

**CAUTION:** In any installation in which the vent of this appliance can be covered due to the construction of the RV or some special feature of the RV such as slide out, pop-up etc. always insure that the appliance cannot be operated by setting the thermostat to the positive “OFF” position and shutting off all electrical and gas supply to the appliance. Never operate furnace with vent covered.

**NOTE:** These furnaces must be installed and vented as described in this manual so that the negative pressure created by the air circulating (return air) fan cannot affect the combustion air intake or venting of any other appliance. It is imperative that the products of combustion be properly vented to the atmosphere and that all combustion air supplied to burner be drawn from the outside atmosphere. (See Installing Vent Assembly).

**NOTE:** Do not install the furnace with the vent facing toward the forward end of the coach. See figures 7 and 8.

**IMPORTANT:** If this furnace is to be connected to a common duct system also serving a cooling unit, a manual or automatic damper is required to prevent any cold conditioned air from circulating back into the furnace. Cold air passing over the furnace combustion chamber during the operation of the cooling unit can result in the formation of condensation inside the furnace combustion chamber. This condensation may promote corrosion and premature failure of the combustion chamber.

**NOTE:** These furnaces shall be installed so the electrical components are protected from water.

These furnaces are design certified for propane/LP gas only. Do not attempt to convert to natural gas.

Gas supply pressure for purposes of input adjustment:
- Minimum - 11” W.C.*
- Maximum - 13” W.C.*

(W.C.* - Water Column).

Part Number 205170
01-06-2015
In the U.S.A., the installation of the furnace must be in accordance with local codes and regulations. In the absence of local codes and regulations, refer to the latest edition of:
3. Furnace must be electrically grounded in accordance with the latest edition of the National Electrical Code NFPA 70.

In Canada, the furnace must be installed in accordance with:
1. Standard CSA Z240.0.2-06 Recreational Vehicles.
2. CSA Standard Z240.6.2-08 C22.2 NO.148-08 Electrical Requirements for Recreational Vehicles.
3. Standard Z240.4.2-08 Installation Requirements for Propane Appliances and Equipment in Recreational Vehicles.
4. CAN/CGA-B149 Installation Codes.
5. Any applicable local codes and regulations.

RETURN AIR

There are two (2) methods described below for installing the furnace. Regardless of the method you choose, you must have a permanent opening provided in the interior cabinetry of the coach directly in front of the furnace. The opening must allow for free, unobstructed removal of the furnace. This opening may be used as a means of providing circulating return air to the furnace. Other openings may be used as well.

It is important that adequate return air be provided to assure normal heating and operation of the furnace. Failure to provide the minimum return air will cause erratic furnace cycling. Refer to the chart shown below for minimum return air requirements.

NOTE: Return air must be from within the living area of the coach.

NOTE: RV's that have a wall of separation to a cargo area (Toy Box) to transport internal combustion engine vehicles must not have return air openings from this area.

1. Locate the furnace near lengthwise center of the coach.
2. Choose a location for installation out of the way of wires, pipes, etc., which might interfere with the installation. Adhere to the minimum clearances from the cabinet to combustible construction as listed in Table 2. Refer to Figure 3 for illustration of furnace clearances.

NOTE: Side and top clearances may be "0" for through the wall installations up to a maximum of 3" wall thickness. (See Figure 1.)

3. When an appliance is installed directly on carpeting, tile or other combustible material, other than wood flooring, the appliance shall be installed on a metal or wood panel extending the full width and depth of the appliance. If preferred, the carpeting, tile or combustible materials, other than wood may be cut away the full length and depth of the appliance plus the appliance minimum clearances to combustibles. (See Table 2.)

4. Determine "x" dimension as shown in Figure 2. The tubes supplied with the furnace will accommodate an installation range for "x" from 1-1/2" - 3". If "x" dimension is less than 1-1/2" or greater than 3", then special vent tubes as charted in Figure 2 must be ordered.

A. IF INSTALLED DIRECTLY AGAINST OUTER SKIN OR "X" DIMENSION IS 0 - 1-1/2"
1. Vent Kit S20767 must be ordered. Do not cut or alter the vent tubes supplied with the furnace.
2. Cut an opening through the inner wall 17-3/4 x 8". This will allow the rear of the furnace to be installed against the outer skin of the coach. (See Figure 1.)
3. Cut two 2-1/4" diameter holes through the outer skin of the coach, as shown in Figure 1.
4. Put furnace in place, making sure that rear of furnace cabinet is as close to outer skin of coach as possible and still assure proper vent tube overlap. (See Installing Vent Assembly.) Secure furnace to cabinet. (See Figure 1.)
5. Secure furnace to the floor using two (2) hole provided in the furnace cabinet. (See Figure 1.)
6. Install vent assembly. (See instructions for installing vent.)

B. IF NOT INSTALLED AGAINST OUTER SKIN AND "X" DIMENSION GREATER THAN 1-1/2"
1. Determine "x" dimension as illustrated in Figure 2. Tube length for "x" dimension are charted. Special tubes, if needed, must be ordered.
2. Locate center lines for exhaust and intake tubes as shown Figure 1. Cut two 2-3/4" diameter holes through coach wall for exhaust and intake. (See Figure 2.)
3. Put furnace in place and secure furnace to cabinet.
4. Secure furnace to the floor using the two (2) holes provided in the furnace cabinet. (See Figure 1.)
5. Install vent assembly. (See instructions for installing Vent.)
6. Reinstall cabinet front.

CLEANANCE FROM DUCTS TO COMBUSTIBLE MATERIAL - 1/4" (See Figure 3)

TABLE 2

INSTALLING VENT ASSEMBLY

The vent outlet must be installed so it is in the same atmospheric pressure zone as the combustion air intake. The exhaust and intake tubes must be installed from the outside, pass through the RV skin and slide onto the furnace exhaust and intake.

WARNING! Do not alter the vent assembly supplied with this furnace. Any modifications will result in improper installation which could cause unsafe furnace operation.

CAUTION! Combustion air must not be drawn from the living area. All air for combustion must be drawn from the outside atmosphere. All exhaust gases must be vented to the outside atmosphere - never inside the RV. Therefore, it is essential to insure that the vent cap and tube assemblies are properly installed.

1. Apply caulking to RV skin behind vent cap as shown in Figure 1. Apply caulking generously around perimeter of vent cap and across center as shown.
2. Insert intake tube through RV skin and slide it onto the furnace intake (See Figure 2.) Minimum tube overlap of 1/2" is required.
3. Insert vent cap exhaust tube through RV skin and slide it onto the furnace exhaust (See Figure 2.) Minimum tube overlap of 1 1/4" is required.
4. Attach vent cap assembly to outer skin of RV with the six (6) screws provided. Do not install vent assembly upside down. The word “Suburban” must be right side up.

CONNECTING GAS SUPPLY

Connect the gas supply to the furnace at the manifold, following the suggestions outlined below. It will be necessary to hold the flare fitting on the furnace manifold when connecting or loosening gas line.

NOTE: The compound used on threaded joints must be resistant to liquefied petroleum (LP) gas.

NOTE: The appliance must be disconnected from the gas supply piping system during any pressure testing of that system at test pressure in excess of 1/2 PSIG.
The appliance must be isolated from the gas supply piping during any pressure testing of the gas supply piping system at test pressure equal to or less than 1/2 PSIG.

1. Connect gas line to the 3/8” elbow at the front of the furnace. (See Figure 1.) Some standards may require the use of a manual shut off valve in the gas line external to the furnace cabinet.

2. In order to maintain a check of gas supplied pressure to the furnace, Suburban advises the installer to provide the 1/8” NPT plug tap for test gauge connection immediately upstream of the gas supply connection to the furnace and that it be readily accessible.

3. After the furnace has been connected to the gas supply, all joints must be checked for leaks.

WARNING! Never check for leaks with an open flame. Turn on the gas and apply soapy water to all joints to see if bubbles are formed.

CONNECTING ELECTRICAL SUPPLY

CAUTION: This furnace is designed for negative ground 12 volt D.C. system only. Do not attempt to alter the furnace for a positive ground system or connect the furnace directly to 115 volts A.C. Damage to furnace component parts will occur. Connect only to a protected circuit fused for not more than 20 amps.

Be sure all wiring to the furnace is of heavy enough gauge to keep the voltage drop through it to a minimum and to provide enough power for start-up surge. No. 12 gauge wire is recommended. If any of the original wire that is supplied with the appliance must be replaced, it must be replaced with type 105° C or its equivalent.

Power supply connections are to be on the right side of the furnace. The wires are color coded, red for positive (+) and yellow for negative (-). This polarity must be observed so the furnace motor will run the proper direction of rotation to insure correct air delivery. (See wiring diagram.)

If the furnace power supply is to be from a converter, we recommend that the converter system used to power the furnace be wired in parallel with the battery. This will serve two purposes:

1. Provide a constant voltage supply to the furnace.
2. Filter any A.C. spikes or volt surges.

CONNECTING DUCTS TO FURNACE

The following duct requirements must be followed in order to assure proper operation of the furnace:

A. The minimum open duct area required to be maintained throughout the entire duct system including through registers:

<table>
<thead>
<tr>
<th>MODEL</th>
<th>SIDE DUCTS</th>
<th>TOP DUCT Area</th>
<th>BOTTOM DUCT Area</th>
</tr>
</thead>
<tbody>
<tr>
<td>SF-20FQ</td>
<td>Min. Open Duct Area</td>
<td>Min. Duct Size</td>
<td>Min. Duct Area</td>
</tr>
<tr>
<td>SF-25FQ</td>
<td>25 SQ. IN.</td>
<td>2</td>
<td>4”</td>
</tr>
<tr>
<td>SF-30FQ</td>
<td>36 SQ. IN.</td>
<td>3</td>
<td>4”</td>
</tr>
<tr>
<td>SF-35FQ</td>
<td>48 SQ. IN.</td>
<td>4</td>
<td>4”</td>
</tr>
<tr>
<td>SF-42FQ</td>
<td>48 SQ. IN.</td>
<td>4</td>
<td>4”</td>
</tr>
</tbody>
</table>

*SF-42Q has 4" round ducts available off of cabinet front.

NOTE: Ducts terminating in a dead air space (like holding tank compartments or cargo areas (Toy Boxes)) with no means for return air recirculation should not be counted in the required duct area. Also ducts 2” in diameter or smaller should not be counted in the required duct area.

B. No outlet register is to be placed within 18” of the return air opening. Any register installed at 18” should never be adjusted to blow the outlet air toward the return air opening. If a register is installed on a wall at 90 degrees to the return air, it can be less than the 18”.

C. Make the duct connections at the furnace cabinet tight. Loose connections will result in overheating of the component parts on the furnace and a reduction of the heating season to assure continued safe operation of the furnace.

D. Avoid making any sharp turns in the duct system. Sharp turns will increase the static pressure in the plenum area and could cause the furnace to cycle.

E. Avoid making a lot of turns in the duct system. The straighter the duct system, the better the performance of the furnace.

F. Maintain a minimum of 1/4” clearance where ducts pass through any combustible construction, such as cabinetry. (See Figure 3.) NOTE: UL listed duct materials can be 0” clearance.

G. Do not install air boosters in the duct system. Such devices will cause the furnace to cycle on limit and to have erratic sail switch operation.

NOTE: After installation of the furnace and duct system is completed, adjustments must be made to obtain a temperature rise within the range specified on the Rating Plate.

INSTALLING THERMOSTAT

The thermostat used with this unit must have NO voltage output to return leg when there is not a call for heat or in the “OFF” setting.

Locate the room thermostat approximately 4'-1/2 feet above the floor on an inside bulkhead where it is not affected by heat from any source except room air. Connect thermostat wiring to the blue wire and blue-white striped wire (blue-white striped wire is power to the thermostat) on right side of furnace. (See wiring diagram.) If your furnace is equipped with a thermostat that has an adjustable anticipator, the anticipator should be set at .7 amps. If you desire longer heating cycles, adjust the anticipator to a higher setting. If you desire shorter heating cycles, adjust the anticipator to a lower setting. Adjustments to the anticipator setting should be made in .5 amp increments.

PREVENTIVE MAINTENANCE

WARNING! If the user of this appliance fails to maintain it in the condition in which it was shipped from the factory or if the appliance is not used solely for its intended purpose or if appliance is not maintained in accordance with the instructions in this manual, then the risk of a fire and/or the production of carbon monoxide exists which can cause personal injury, property damage or loss of life.

CAUTION: Label all wires before disconnecting for servicing. Proper polarity must be observed so the furnace motor will run with the proper direction of rotation to insure correct air delivery. (See wiring diagram.)

CAUTION: Label all wires prior to disconnection when servicing controls. Wiring error can cause improper and dangerous furnace operation.

Always verify proper operation of furnace after servicing.

Your furnace should be inspected by a qualified service agency yearly before turning the furnace on. Particular attention should be given to the following items:

1. Inspect furnace installation and vent termination to be sure furnace is properly secured in place (see Installation Instructions), that vent terminates to the atmosphere, and that vent tubes overlap properly (see Installing Vent Assembly.)

2. Inspect chamber and venting to assure that these components are physically sound without holes or excessive corrosion and that the installation and/ or re-installation is in accordance with Suburban’s installation instructions. (Reference installation manual supplied with furnace.)

3. Check the base on which furnace is mounted. Be sure it is physically sound, void of any sagging, deterioration, etc.

4. Inspect furnace, the venting, ducting and gas piping to furnace for obvious signs of deterioration. Correct any defects at once.

5. Inspect combustion chamber for restrictions in exhaust or intake. It is imperative that the flow of intake combustion air and the flow of exhaust gases be expelled to the outside atmosphere not be obstructed. Any shut or loose debris should be blown out using compressed air. (See Figure 6.)

6. Inspect all gaskets. If any gaskets show signs of leakage or deterioration, replace them. Safe operation of the furnace depends on all gaskets being tight.

7. Inspect return air inlet openings to the furnace. Remove any restrictions to assure adequate air flow.

WARNING! It is imperative that the products of combustion be properly vented to atmosphere and that all combustion air supplied to burner be drawn from outside atmosphere.

You, as the owner/user, should inspect the furnace monthly during the heating season for presence of soot on vent. Operating the furnace under this condition could lead to serious property damage, personal injury or loss of life. If soot is observed on the vent, immediately shut the furnace down and contact a qualified service agency.

Listed below are several safety related items that you should follow during the heating season to assure continued safe operation of the furnace.

1. Inspect furnace venting. Venting must be free of obstructions, void of soot, and properly terminated to the atmosphere. (See Installing Vent Assembly.)

WARNING! Do not install screens over the vent for any reason. Screens will become restricted and cause unsafe furnace operation. Accessories are being marketed for RV products which we do not recommend. For your safety, only factory authorized parts are to be used on your furnace.

2. Periodically inspect the vent for obstructions or presence of soot. Soot is formed whenever combustion is incomplete. This is your visual warning that the furnace is operating in an unsafe manner. If soot is present, immediately shut down furnace and contact your dealer or a qualified service person.

3. Keep furnace clean. More frequent cleaning may be required due to excessive lint from carpeting, bedding material, etc. It is imperative that control compartments, burners and circulating air passageways of the appliance be kept clean.
4. The motor is permanently lubricated and requires no oiling.
5. Keep the furnace area clear of any combustible materials, gasoline or other flammable vapor and liquids.
6. Before operating furnace, check the location of the furnace vent to make sure it will not be blocked by the opening of any door on the trailer. If it can be blocked, do not operate the furnace with the door open.
7. Do not restrict the flow of combustion air or the warm air circulation to the furnace. To do so could cause personal injury and/or death.
8. Never operate the furnace if you smell gas. Do not assume that the smell of gas in your RV is normal. Any time you detect the odor of gas, it is to be considered life threatening and corrected immediately. Extinguish any open flames including cigarettes and evacuate all persons from the vehicle. Shut off gas supply at LP gas bottle. (See safety notice on front cover of this manual.)
9. Immediately shut furnace down and call a service agency if furnace cycles erratically or delays on ignition.

**WARNING!** Should overheating occur, or the gas supply fail to shut off, shut off the manual valve (if so equipped) or the valve at the outside LP tank to the appliance before shutting off the electrical supply.

10. Never attempt to repair damaged parts. Always have them replaced by a qualified service agency.
11. Never attempt to repair the furnace yourself. Seek the help of a qualified service person.
12. Never restrict the ducting installed by your trailer manufacturer. To do so could cause improper furnace operation.
13. Do not install air blowers in the duct system. Such devices will cause the furnace to cycle and to have erratic sail switch operation.
14. Clothing or other flammable material should not be placed on or near the appliance.
15. Always follow the operating instructions. Do not deviate from the step-by-step procedures.
16. Do not use this appliance if any part has been submerged under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control that has been submerged under water.
17. When considering add-on rooms, porch or patio, attention must be given to the construction of the RV or some special feature of the RV such as slide out, pop-up, etc. always insure that the appliance cannot be operated by setting the thermostat in the positive “OFF” position and shutting off all electrical and gas supply to the appliance. Never operate furnace with vent covered.

**INSTALLATION AND REMOVAL OF UNIT**

**TO REMOVE**
1. Disconnect power supply at furnace.
2. Remove vent cap assembly.
3. Disconnect gas connections.
4. Remove cabinet front (2 screws).
5. Remove tie-down screw from center of unit and remove furnace from cabinet.

**TO INSTALL**
1. Slide unit into cabinet. **NOTE:** Care must be taken in routing wiring to back of cabinet and outside of cabinet.
2. Reinstall tie-down screw, securing chamber assembly to cabinet.
3. Reinstall cabinet front.
4. Connect gas line.
5. Check gas connections for leaks using a soap and water solution. Correct any gas leaks immediately.
6. Reinstall vent cap assembly.
7. Reconnect power supply.

**OPERATING INSTRUCTIONS**

**NOTE:** During initial firing of this furnace, a burn-off of excess paint and oils remaining from manufacturing process may cause “smoking” for 5 - 10 minutes.

1. **STOP!** Read Users Information Manual supplied with furnace.
2. Turn the manual valve (if so equipped) or the valve at the outside LP tank to the “OFF” position. Do not force.
3. Set thermostat above room temperature to begin blower operation. A slight delay will occur before the blower comes on. Allow blower to run for 5 minutes for combustion air purge cycle. If blower does not come on or stops before ignition cycle, go to shut down and contact your dealer or a local recreational vehicle service agency.
4. After 5 minutes, move thermostat lever below room temperature. Blower will remain on. Wait approximately 2 minutes for blower to go off.

5. Open manual shut-off valve (if so equipped) or the valve at the outside LP tank. Correct operating characteristics depend on the valve being positioned fully open. Never attempt to operate with a valve partially closed. **NOTE:** This furnace is equipped with a valve shut-off switch, with switch in “OFF” position. Gas will not flow to burner nor will the furnace operate.
6. Set thermostat lever to desired setting. If set above room temperature, blower will come on.
7. Allow 30 seconds for main burner to light after blower comes on. This furnace is equipped with an ignition device which automatically lights the burner. Do not try to light the burner by hand.
8. If burner does not light, replace Steps 1 through 8.
9. If after three (3) attempts with no ignition, go to shut down and contact your dealer or a local recreational vehicle service agency. Do not continue to cycle furnace through thermostat in an attempt to get ignition. **NOTE:** If furnace should lock out, the blower will go off in 5 minutes and remain off until unit is reset by reactivating thermostat.

**TO SHUT DOWN**
1. Set the thermostat to lowest setting, then move lever to “OFF” position.
2. Turn manual shut-off valve (if so equipped) to the “OFF” position. Do not force.

**ELECTRODE ADJUSTMENT**
For consistent ignition of the burner, it is important that the electrode be positioned properly over the top of the burner. The electrode was set at the factory for proper ignition and should not need further adjustment; however, if you should experience inconsistent ignition, reposition electrode as follows:

**Equipment needed:**
- flashlight • black felt-tip pen • needle-nose pliers • measuring tape

**NOTE:** Furnace must be removed. (See instructions for removing unit.)

1. Remove burner from combustion chamber by removing six (6) screws which attach the burner to the chamber and air baffles (plates).
2. Locate the lance in relation to the burner ports for electrode positioning by:
   a. Shine a flashlight into the burner venturi as illustrated. (Be sure flashlight lens is against the end of the burner.)
   b. Light will reflect off the lance in the venturi of the burner and shine through a portion of the two (2) rolls of burner ports in the top of the burner.
   c. Using a black felt-tip pen, mark a line along top of burner 3/16” in back of the lance and parallel with lance. Make an additional mark indicating the center line of the lance. (See illustration.) Both marks will be used later as reference marks; therefore, keep lines thin.
3. Reassemble the burner.
4. Adjust electrode so the electrode probe is positioned along the marked center line of the burner lance and the tip of the electrode terminates 3/16” from the back of the lance. (At the line marked in Step 2-c.) (See Figure 4.)
5. **IMPORTANT:** Be sure electrode probe maintains a 1/8” spark gap over the burner as illustrated.
6. Reinstall the furnace into the cabinet following the instructions in the manual.

**PARTS AND SERVICE**
Contact a conveniently located recommended Suburban Service Center. Describe to them the nature of your problem, make an appointment, if necessary, and provide for delivery of your RV with the appliance installed.

To obtain information on locating a local service agency, contact:

TWO YEAR LIMITED WARRANTY
SUBURBAN RECREATIONAL VEHICLE FURNACE

TWO YEAR LIMITED WARRANTY
This Suburban product is warranted to the original purchaser to be free from defects in material and workmanship under normal use and maintenance for a period of two years from date of purchase whether or not actual use begins on that date. It is the responsibility of the consumer/owner to establish the warranty period. Suburban does not use warranty registration cards for its standard warranty. You are required to furnish proof of purchase date through a Bill of Sale or other payment records.

Suburban will replace any parts that are found defective within the first two years and will pay a warranty service allowance directly to the recommended Suburban Service Center at rates mutually agreed upon between Suburban and its recommended service centers. Replacement parts will be shipped FOB the shipping point within the Continental United States, Alaska and Canada to the recommended service center performing such repairs. All freight, shipping and delivery cost shall be the responsibility of the owner. The exchanged part or unit will be warranted for only the unexpired portion of the original warranty. Before having warranty repairs made, confirm that the service agency is a recommended service center for Suburban. DO NOT PAY THE SERVICE AGENCY FOR WARRANTY REPAIRS; SUCH PAYMENTS WILL NOT BE REIMBURSED.

Suburban reserves the right to examine the alleged defect in the furnace or component parts, and it is the owner’s obligation to return the furnace and/or component parts to Suburban or its representative. When returning a furnace, it must include all component parts and the serial number plate. Returned component parts must be individually tagged and identified with the furnace’s model number, serial number and date of installation.

For warranty service, the owner/user should contact the nearest recommended Suburban Service Center, advising them of the model and serial numbers (located on the furnace) and the nature of the defect. Transportation of the RV to and from the Service Center and/or travel expenses of the Service Center to your location is the responsibility of the owner/user. A current listing of recommended service centers may be obtained from Suburban’s website, www.AIRXCEL.com. If you cannot locate a recommended service center locally, the service agency chosen to perform warranty repairs must contact our Service Department at 423-775-2131 for authorization before making repairs. Unauthorized repairs made will not be paid by Suburban.

THREE YEAR LIMITED WARRANTY ON HEAT EXCHANGER
The furnace heat exchanger is further warranted to be free from defects in material and workmanship during the third through fifth year after the date of original purchase. A replacement heat exchanger will be provided under the same conditions as stated in the two year warranty except no labor reimbursement will be provided.

LIMITATION OF WARRANTIES
ALL IMPLIED WARRANTIES (INCLUDING IMPLIED WARRANTIES OF MERCHANTABILITY) ARE HEREBY LIMITED IN DURATION TO THE PERIOD FOR WHICH EACH LIMITED WARRANTY IS GIVEN. SOME STATES DO NOT ALLOW LIMITATIONS ON HOW LONG AN IMPLIED WARRANTY LASTS SO THE ABOVE LIMITATIONS MAY NOT APPLY TO YOU. THE EXPRESSED WARRANTIES MADE IN THIS WARRANTY ARE EXCLUSIVE AND MAY NOT BE ALTERED, ENLARGED, OR CHANGED BY ANY DISTRIBUTOR, DEALER OR OTHER PERSON WHOMSOEVER.

SUBURBAN WILL NOT BE RESPONSIBLE FOR:
1. Normal maintenance as outlined in the installation, operating and service instructions owner’s manual including cleaning of component parts; such as, orifices and burners.
2. Initial checkouts and subsequent checkouts which indicate the furnace is operating properly, or diagnosis without repair.
3. Damage or repairs required as a consequence of faulty or incorrect installation or application not in conformance with Suburban instructions.
4. Failure to start and/or operate due to loose or disconnected wires; water or dirt in controls, fuel lines and gas tanks; restriction or alteration of return air circulation; low voltage.
5. Routine adjustments that may be required to the thermostat, electrode and burner.
6. Costs incurred in gaining access to the furnace.
7. Parts or accessories not supplied by Suburban.
8. Freight charges incurred from parts replacements.
9. Damage or repairs needed as a consequence of any misapplication, abuse, unreasonable use, unauthorized alteration, improper service, improper operation or failure to provide reasonable and necessary maintenance.
10. Suburban products whose serial number has been altered, defaced or removed.
11. Suburban products installed or warranty claims originating outside the Continental U.S.A., Alaska, Hawaii and Canada.
12. Damage as a result of floods, winds, lightning, accidents, corrosive atmosphere or other conditions beyond the control of Suburban.
13. ANY SPECIAL, INDIRECT OR CONSEQUENTIAL PROPERTY, ECONOMIC OR COMMERCIAL DAMAGE OF ANY NATURE WHATSOEVER.

Some states do not allow the exclusion of incidental or consequential damages, so the above limitation may not apply to you.

NO REPRESENTATIVE, DEALER, RECOMMENDED SERVICE CENTER OR OTHER PERSON IS AUTHORIZED TO ASSUME FOR SUBURBAN MANUFACTURING COMPANY ANY ADDITIONAL, DIFFERENT OR OTHER LIABILITY IN CONNECTION WITH THE SALE OF THIS SUBURBAN PRODUCT.

This warranty gives you specific legal rights, and you may also have other rights which vary from state to state.

IF YOU HAVE A PRODUCT PROBLEM
FIRST:
If your RV has its original furnace and is still under the RV manufacturer’s warranty, follow the steps suggested by your dealer or manufacturer of the RV.
SECOND:
Contact a conveniently located recommended Suburban Service Center. Describe to them the nature of your problem, make an appointment, if necessary, and provide for delivery of your RV to the selected service center.
THIRD:
For the location of the nearest service center, refer to the listing provided or contact:

Suburban Manufacturing Company
Customer Service Department
676 Broadway Street
Dayton, Tennessee 37321
(423) 775-2131, Ext. 7101
www.AIRXCEL.com

FOR FUTURE REFERENCE, YOU SHOULD RECORD THE FOLLOWING INFORMATION:

MODEL NUMBER:
SERIAL NUMBER:
STOCK NUMBER:
DATE OF PURCHASE:
To obtain services necessary under warranty, the owner should contact the nearest recommended Suburban service center, mentioning the model and number of the unit, and the type of defect. The owner/user must assume the cost of delivery of the recreational vehicle between his domicile and the chosen service center, or the cost of the personnel of the service center. One can obtain a recent list of recommended service centers at the address: www.AIRXCEL.com. In case that there is no authorized local center, the service center chosen for the performance of works under warranty must contact our service department at number 423-775-2131, before starting repairs to obtain authorization. Suburban will not pay for repairs performed without authorization.

LIMITATIONS OF GUARANTEES

Some provinces do not allow the limitation of incidental or consequential damages; therefore, the limitation above may not apply to you. NO REPRESENTATIVE, DEALER, OR OTHER PERSON IS AUTHORIZED TO ASSUME ANY OTHER RESPONSIBILITY OR OBLIGATION IN CONNECTION WITH THE SALE OF THIS SUBURBAN PRODUCT. THIS GUARANTEE GIVES YOU SPECIFIC LEGAL RIGHTS, YOU MAY ALSO HAVE OTHER RIGHTS, WHICH VARY FROM PROVINCE TO PROVINCE. IF A PROBLEM OCCURS

For reference, you must register the following information:

Limited warranty of two years

Suburban - Heating for Recreational Vehicle

Contact a recommended Suburban service center. Describe the nature of the problem to the technician, make an appointment if necessary, and report any gas connections, fuel lines, and gas tanks; incorrect gas pressure; insufficient electrical voltage.

If the problem is due to incorrect or inadequate maintenance.

Products Suburban whose serial number has been altered, eliminated, or made indistinguishable.

Products Suburban installed or used outside the following geographic areas: continental United States, Alaska, Hawaii, and Canada.

Damages attributable to flooding, wind, lightning, accident, corrosive atmosphere, and other situations that Suburban cannot control.

Normal maintenance, as defined in the installation, use, and maintenance instructions of the owner's manual, including cleaning of components, electrodes, burner tubes, burner stand, and thermocouple.

Fees due to access to the equipment.

Parts or accessories not provided by Suburban.

Transport costs related to the replacement of parts.

GARANTIE LIMITÉE DE DEUX ANNÉES

Consumer/proprietor is responsible for proving the duration of warranty. Suburban does not use a warranty registration card for its standard warranty. The owner must present evidence of the purchase date, such as a receipt or other document that attests to the payment.

During the first two years, Suburban will replace any part found to be defective, and will pay a warranty labor allocation directly to the recommended Suburban service center, according to the rate defined by mutual agreement between Suburban and its recommended service centers. The parts replaced are not covered by this warranty.

Within the United States, Alaska, and Canada. The owner will bear all transportation, delivery, and shipping costs. Any parts or components replaced are not covered by this warranty.

Suburban reserves the right to examine the defects in the heating system or one of its components. It is the owner's obligation to return the heating system or its components to Suburban or its representative. When the heating system is returned, it must include all parts and the plate containing the serial number.

To obtain warranty services, the owner should contact the nearest recommended Suburban service center, mentioning the model and serial number (indicated on the equipment), and the type of anomaly. The owner/user must assume the cost of delivery of the recreational vehicle between his domicile and the service center, or the cost of personnel traveling. You can get a recent list of recommended service centers at the address: www.AIRXCEL.com. If there is no local authorized center, the chosen service center for the performance of works under warranty must contact our service department at number 423-775-2131, before starting repairs to obtain authorization. Suburban will not pay for repairs performed without authorization.
Pour le nettoyage de la chambre de combustion, on doit retirer l'appareil de la caisse, et retirer également le ventilateur et les organes de commande; il ne doit rester que la chambre de combustion, comme on le voit sur l'illustration. Injecter de l'air comprimé dans la chambre selon les indications des flèches pour expulser la suite et les débris.
La surface libre totale sans obstruction des ouvertures de retour d'air de l'appareil de chauffage ne doit pas être inférieure au minimum spécifié à la table 1.

À Espacement = 0 po

Maintenir un espacement de 1/4 po lorsqu'les conduits traversent une paroi de la caisse. L'espacement peut être nul pour un conduit homologation UL.
PIÈCES ET SERVICE

Contactez idéalement situé au centre de service recommandé Suburban.

Décrire la nature de votre problème, prendre rendez-vous, si nécessaire, et fournir pour la livraison de votre RV avec l'appareil installé.

Pour obtenir des informations sur la localisation d'un organisme de service local, contactez :

AIRXCEL, Inc., Suburban Division

Figure 2

Les instructions suivantes concernent une installation en aide. Pour les installations de première main, consulter la notice d'installation fournie avec l'appareil de chauffage.

Contacter les services des pièces en cas de service nécessaire.

Pour obtenir des instructions sur l'installation de votre RV, visiter le site Web de AIRXCEL.
INSTRUCTIONS D'UTILISATION

1. ATTENTION
   Lis le manuel d'information de l'utilisateur avant d'utiliser l'appareil.

2. AVERTISSEMENT
   Ne jamais faire fonctionner l'appareil lorsque le véhicule est en mouvement. Il est important de vérifier que l'électrode est correctement positionnée au-dessus du brûleur. La lumière sera réfléchie par la lance dans le venturi, et elle sera visible à travers une partie des orifices du brûleur.

3. PRECAUTION
   Veiller à ce que l'entrefer d'éclatement des étincelles au niveau du brûleur soit correctement remis en place.

4. RÈGLES DE L'ÉLECTRODE
   Pour que le processus d'allumage de la flamme fonctionne bien, il est important que l'électrode soit correctement positionnée au-dessus du brûleur. La lumière sera réfléchie par la lance dans le venturi, et elle sera visible à travers une partie des orifices du brûleur.

5. INSTALLATION ET DÉPOSE DE L'APPAREIL
   1. Déposer l'appareil de chauffage.
   2. Refermer le robinet manuel (s'il y en a un) de la canalisation de gaz. Ne pas forcer.
   3. Ouvrir le robinet d'arrêt de la canalisation de gaz, ou le robinet de la bouteille de propane. Ne pas forcer.
   4. Régler le thermostat pour une température supérieure à celle de la pièce pour s'assurer que l'électrode est correctement positionnée au-dessus du brûleur.
   5. Prévoir un délai de 30 secondes pour l'allumage de la flamme du brûleur.
   6. Si le brûleur ne s'allume pas, ne pas forcer.
   7. Si le brûleur ne s'allume pas, ne pas forcer.
   8. Si le brûleur ne s'allume pas, ne pas forcer.
   9. Si le brûleur ne s'allume pas, ne pas forcer.
   10. Ne jamais tenter de régler les composants endommagés. On doit toujours les faire remplacer par un professionnel de service compétent.

6. INSTALLATION DU ROBINET DE L'APPAREIL
   1. Positionner l'appareil de chauffage sur la pièce. Laissez-le cool pour une température appropriée.
   2. Ne pas placer d'objets ou d'articles inflamables sur l'appareil.
   3. Avant de faire fonctionner l'appareil, inspecter la bouchée de décharge pour toute obstrucion ou présence de suie. De la suie se forme chaque fois que la combustion est incomplète. C'est un indice visuel d'une déficience de la combustion. En cas de découverte de suie dans la canalisation de décharge, consulter immédiatement un technicien d'entretien qualifié.

7. DÉPOSE
   1. Déposer l'avant de la caisse (2 vis).
   2. Déposer les bouches d'admission d'air/décharge.
   3. Déconnecter la source de gaz.
   4. Déposer le robinet manuel (si il y en a un) de la canalisation de gaz.
   5. Formez le câblage jusqu'à l'arrière de la caisse et à l'extérieur. Il est important de vérifier que l'électrode est correctement positionnée au-dessus du brûleur. La lumière sera réfléchie par la lance dans le venturi, et elle sera visible à travers une partie des orifices du brûleur.

8. REMARQUE
   On doit déposer l'appareil de chauffage.
   1. Retirer le bloc du brûleur de la chambre de combustion. Choisir les six (8) vis qui fixent le bloc du brûleur à la chambre de combustion. C'est un point d'arrêt important de l'appareil. Il est important de vérifier que l'électrode est correctement positionnée au-dessus du brûleur. La lumière sera réfléchie par la lance dans le venturi, et elle sera visible à travers une partie des orifices du brûleur.

9. IMPORTANT
   1. Déposer l'appareil dans la caisse conformément aux instructions du manuel.
   2. Déposer le façade de la caisse. La porte de la caisse se termine à 3/4 de la longueur de la bouteille de gaz. Cet appareil est équipé d'un robinet manuel (si il y en a un) de la canalisation de gaz. Ne jamais tenter de régler les composants endommagés. On doit toujours les faire remplacer par un professionnel de service compétent.

10. AVERTISSEMENT
   Ne jamais tenter de régler les composants endommagés. On doit toujours les faire remplacer par un professionnel de service compétent.

11. AVERTISSEMENT
   Ne jamais tenter de régler les composants endommagés. On doit toujours les faire remplacer par un professionnel de service compétent.

12. AVERTISSEMENT
   Ne jamais tenter de régler les composants endommagés. On doit toujours les faire remplacer par un professionnel de service compétent.

13. REMARQUE
   On doit déposer l'appareil de chauffage.
   1. Retirer le bloc du brûleur de la chambre de combustion. Choisir les six (8) vis qui fixent le bloc du brûleur à la chambre de combustion.
   2. Positionner le bloc du brûleur et l'électrode en rapport avec les orifices du brûleur.
   3. Positionner le bloc du brûleur et l'électrode en rapport avec les orifices du brûleur.
   4. Positionner le bloc du brûleur et l'électrode en rapport avec les orifices du brûleur.
   5. Positionner le bloc du brûleur et l'électrode en rapport avec les orifices du brûleur.

14. AVERTISSEMENT
   Ne jamais tenter de régler les composants endommagés. On doit toujours les faire remplacer par un professionnel de service compétent.

15. AVERTISSEMENT
   Ne jamais tenter de régler les composants endommagés. On doit toujours les faire remplacer par un professionnel de service compétent.

16. AVERTISSEMENT
   Ne jamais tenter de régler les composants endommagés. On doit toujours les faire remplacer par un professionnel de service compétent.

17. AVERTISSEMENT
   Ne jamais tenter de régler les composants endommagés. On doit toujours les faire remplacer par un professionnel de service compétent.

18. AVERTISSEMENT
   Ne jamais tenter de régler les composants endommagés. On doit toujours les faire remplacer par un professionnel de service compétent.
Il est impératif que les produits de combustion soient acheminés pour assurer un fonctionnement sûr de l’appareil de chauffage. Il suffit de suivre les instructions d’installation (consulter le schéma de câblage des appareils de chauffage pour plus de détails), mais les propriétaires de l’appareil devraient également connaître les principes de base de l’installation et du fonctionnement. Enfin, il est impératif que les usagers de l’appareil connaissent les conséquences de négliger de le maintenir dans les conditions de sécurité requises.

L’usager de cet appareil devrait être en mesure de connaître les conséquences de négliger de le maintenir dans les conditions de sécurité requises. Enfin, il est impératif que les usagers de l’appareil connaissent les conséquences de négliger de le maintenir dans les conditions de sécurité requises.}

MISE EN GARDE: Étiqueter tous les fils avant de les déconnecter pour des opérations d’entretien. Respecter la polarité indiquée pour que le moteur fonctionne correctement. (Voir le schéma de câblage.)

MISE EN GARDE: Étiqueter tous les fils avant de les déconnecter pour les opérations d’entretien des organes de commande. Des erreurs de câblage peuvent susciter un fonctionnement incorrect et une situation dangereuse.

Vérifier toujours le fonctionnement correct de l’appareil après des opérations d’entretien. Il est recommandé de faire une inspection visuelle du système de décharge des gaz de combustion. Il faut qu’il n’y ait aucune obstruction ou accumulation de suie et que le conduit se termine correctement dans l’atmosphère. (Voir Installation des bouches d’admission d’air/décharge).

Il y a deux méthodes d'installation de l'appareil de chauffage décrites ci-dessous.

**Méthode 1:** L'appareil est installé directement contre le panneau métallique ou de bois dont la longueur et la largeur sont suffisamment grandes pour recevoir l'appareil. La dimension de l'ouverture doit être comprise entre 3 et 4 pouces, ou encore elle peut être de 0 à 1 1/2 pouces. L'appareil est fixé sur le panneau métallique ou de bois à l'aide des soupapes d'arrêt et des tringles utilisées pour le fixer à sa place. Les soupapes d'arrêt et les tringles doivent être insérées dans les orifices de l'appareil, conformément aux instructions données par le fabricant. L'appareil est fixé à la source de gaz, conformément aux suggestions ci-dessous. Il est nécessaire de fixer l'appareil de chauffage au plancher en utilisant les deux trous prévus à cet effet dans le bâti de l'appareil. (Voir Figure 1.)

**Méthode 2:** L'appareil est installé dans un compartiment du véhicule avec un carrelage ou un tapis ou bien dans un compartiment de bois ou de métal dont la longueur et la largeur sont suffisamment grandes pour recevoir l'appareil. La dimension de l'ouverture doit être comprise entre 3 et 4 pouces, ou encore elle peut être de 0 à 1 1/2 pouces. L'appareil est fixé sur le panneau métallique ou de bois dont la longueur et la largeur sont suffisamment grandes pour recevoir l'appareil. (Voir Figure 1.)

AVERTISSEMENT!

Les instructions écrites fournies dans le manuel. Aucun agent-représentant ou employé de Suburban ou autre personne, n'a l'autorité pour changer, modifier ou déroger le contenu des instructions fournies dans ce manuel.

CES APPAREILS DE CHAUFFAGE SONT CONÇUS ET INSTALLÉS DE FAÇON QU’ILS PUISSENT ÊTRE ENLEVÉS SEULEMENT À PARTIR DE L’INTÉRIEUR DU VÉHICULE RÉCRÉATIF.

SI L’APPAREIL DOIT ÊTRE INSTALLÉ À LA VERTICALE, VOUS DEVEZ UTILISER LE KIT # 520965 (INSTRUCTIONS D’INSTALLATION SONT INCLUS DANS LE KIT).

MISE EN GARDE: Si c’est possible, ne pas installer l’appareil de chauffage dans un espace libre de sécurité d’au moins 6 po entre la bouche de décharge de l’appareil et la porte, le panneau, ou le couvercle. Vérifiez toujours que le matériau utilisé pour la porte ne devient pas endommagé avec les températures de l’échappement de cet appareil de chauffage lorsqu’une porte, un panneau, ou un couvercle est dans la position ouverte.

REMARQUE: Lors de l’installation de l’appareil, ne pas orienter la bouche de décharge vers l’avant du véhicule. Ne pas installer cet appareil sur un parement de vinyle avant d’avoir d’abord consulté le fabricant du parement, ou découpé le parement au voisinage de la bouche de décharge pour éviter de couvrir la bouche de décharge. Pour les réparations, contacter le fournisseur de gaz ou un établissement de réparation compétent, ou le service de la sécurité du gaz. Si c’est impossible de contacter un fournisseur de gaz ou un établissement de réparation compétent, contacter le service de la sécurité du gaz.

Les déficiences dans les opérations d’installation, réglage, modification, réparation ou entretien peuvent être la cause de dommages matériels ou corporels, voire d’un accident mortel. Les opérations d’installation et de réparations doivent être exécutées par un installateur compétent ou le personnel d’un établissement de service ou du fournisseur de gaz.

La conception de cet appareil de chauffage a été homologuée pour l’installation dans les véhicules récréatifs seulement. Pour que l’appareil fonctionne en conformité avec les critères de sécurité généralement acceptés, on doit se conformer aux instructions d’installation. Toute non-conformité par rapport aux instructions d’installation rend la garantie de l’appareil invalide et annule toute responsabilité de la part de AIRXCEL, INC. - SUBURBAN DIVISION.

Pouvez-vous vérifier les informations contenues dans ce manuel de fonctionnement, dans le manuel d’utilisation fournis avec cet appareil. Les opérations d’installation et de réparations doivent être exécutées par un installateur compétent ou le personnel d’un établissement de service ou du fournisseur de gaz.

Aucune pièce d’appareil de chauffage n’est réparable ou démontable. Il faut remplacer l’ensemble de l’appareil de chauffage en cas d’endommagement ou de défaillance. Les appareils de chauffage de ce type ne peuvent pas être réparés ou remanufacturés sans perturber la conformité à la loi ou les normes de sécurité.

REMARQUE: Lors de l’installation de l’appareil, ne pas orienter la bouche de décharge vers l’avant du véhicule.
